UNISYS

ClearPath® MCP Software Series

Product Information Sheet

Freedom. Power. Flexibility.

Highlights

- A complete, software-based version of the ClearPath MCP operating environment that is deployable on industry-standard hardware and hypervisors.
- The core ClearPath MCP attributes and defining characteristics are embedded in each deliverable.
- Current product offerings span entry-level to high-end workloads, application development and testing.

Your applications, your business

Success in the digital age means playing by a new set of rules. You must be nimble and decisive and capitalize on the latest trend at a moment's notice. And you must constantly reimagine how you operate to stay relevant no matter the competitive pressures.

Because of this, applications have become the new differentiator. Applications are critical to your organization, and keeping them current, available and ready for use on several channels and devices is essential. It's how you'll keep enhancing your brand. And it's how you'll continue to bring more value to your business.

Making the application era your era

With the ClearPath® MCP Software Series, you'll be able to participate in — and benefit from — this new "application era." The ClearPath MCP Software Series represents an evolutionary journey that will empower you to implement a fully featured, software-based version of

the ClearPath MCP environment on your preferred industry-standard hardware as well as on VMware® and Hyper-V hypervisors.

This way, you'll be able to incorporate your applications into the rest of your infrastructure seamlessly — be it a private or hybrid cloud, virtual environment or software-defined data center — without forgoing the proven attributes you trust to run your business. As a ClearPath MCP user, you'll have access to several Software Series deliverables that work together to help you redefine how you create, release and manage your applications.

Powered by software

Whether you deploy it in your data center, a hypervisor or your cloud, there is a ClearPath MCP Software Series offering that's right for your business. Current deliverables include:

- **ClearPath MCP Platinum:** A complete MCP operating environment built to support high-end production workloads and offer unparalleled deployment and business model flexibility.
- **ClearPath MCP Gold:** A complete MCP operating environment built to support mid-level production workloads — including Unisys Agile Business Suite (AB Suite®) workloads — offers unparalleled deployment and business model flexibility.
- **ClearPath MCP Bronze and Silver:** Entry-level environments designed for both general-purpose and AB Suite workloads as well as specific business continuity and disaster recovery scenarios.
- **ClearPath MCP Developer Studio**: A complete development platform featuring the MCP Software

Developer's Kit and most of the runtime software required to test new features slated for production deployment, including Unisys AB Suite. Unisys offers several editions of the ClearPath MCP Developer Studio software to address your specific needs best.

- **ClearPath MCP Developer Studio personal edition**: A portable version of Developer Studio designed for development, testing and demonstration purposes.
- **Flexible licensing models**: ClearPath MCP Platinum, Gold and Developer Studio support a consumption model that enables you to pay for resources as you use them. Or you can license a fixed capacity model to address peak performance needs.

Your operations, refined

When you use the ClearPath Software Series, you'll have the flexibility to define — and just as quickly redefine — how the ClearPath Forward® environment supports and enables your organization's changing business and IT demands. With the freedom to choose how, when and where you incorporate your MCP applications into the rest of your infrastructure, you'll find it easier to comply with your organization's hardware standards — all while you realize more value from the investments you've made in technology and people.

And since the deliverables underpinning the ClearPath MCP Software Series sustain the ClearPath Forward environment's defining attributes — including multilayered security, proven reliability and high-transaction-volume processing — you'll smoothly transition to a software-based world. You won't have to rebuild or recompile your applications to accommodate this shift.

This way, you'll become more adaptable, more agile and better equipped to make sure your applications continue driving client satisfaction and competitive advantage.
