Use case

Unisys Cloud Financial Analysis and Optimization

Streamlining cloud financial management

How can your investment in cloud technology fuel innovation without burning through your budget? The way you answer this is crucial for maintaining financial health while driving digital transformation. Unisys Cloud Financial Analysis and Optimization is designed to address this need, empowering organizations to enhance visibility, optimize resources and ensure cost-effective cloud operations regardless of your cloud environment complexity.

Scenario

Organization size and scope: all organizations using cloud services, from small businesses to global enterprises

Objective:

improve cloud ROI by optimizing spending and resources while driving innovation Organizations are eager to maximize the value derived from their cloud spend. However, native tools from cloud providers have limited functionality and scalability across multiple accounts and business units. Organizations also face complex cloud pricing models, rapidly evolving cloud offerings, overprovisioned resources, and a lack of bill granularity and standardization among provisions.

With the Unisys Cloud Financial Analysis and Optimization solution, your FinOps strategy can evolve in sync with your cloud usage. Ready to gain better control of your cloud spending?

How Unisys delivers value

Unisys Cloud Financial Analysis and Optimization gives you a structured approach to architect and scale cloud workloads. Optimize your organization's cloud spending through several valuable capabilities.

- Spending intelligence: Insights on cloud usage, rates, discounts and billing
- Increased productivity: Cloud accelerators and automation of management and operational tasks for optimizing business and IT performance
- Security and compliance: Policy enforcement automation, ID authentication, vulnerability detection, organizational change management processes and periodic or on-demand compliance reviews
- Increased agility: Accelerated decision-making by combining governance and automation, helping you adapt to changing business demands
- ROI enhancement: Cost containment through monitoring, refining, and automating metrics and policies
- Expert-driven analysis: Identification and evaluation of spending trends, anomalies and cost-saving opportunities, ensuring you benefit from FinOps Foundation certified professionals.

Optimized spending potential

Implementing Unisys Cloud Financial Analysis and Optimization can increase your organization's accountability from cost and billing validation, fostering a culture of financial responsibility:

- Budget reporting by customizable units
- Cost reduction recommendations to identify hidden cloud costs and monitor resource spend
- Chargebacks and showbacks that map actual charges by lines of business or groupings
- Reserved Instance (RI) purchases optimized based on historical usage, reservation types and expiring reservations
- Identification of opportunities to right-size underutilized resources, embrace modern architectures and automate waste elimination
- Reallocation rules for distributing cloud costs among business groups, departments and agencies

These capabilities will give you an understanding of your cloud spend and enable you to forecast based on historical data, while budgeting more accurately and predictably.
